UltimateBNB White Paper

This white paper aims to inform potential investors and interested individuals on the elements, mechanics and direction of Ultimate BNB. Below, demonstrated in detail is the unique redistribution mechanics paired with the tokenomics operated by the project's contract. The token currently has the highest reward system on the BSC and aims to provide investor satisfaction by yielding the most reward for their investment. In the scheme of the Binance Smart Chain innovations, Safemoon may have been the pioneer in bringing awareness to RFI and HODL rewards, but UltimateBNB seeks to lead in the movement for financial freedom. We hold a clear vision for becoming the most sophisticated auto-claim BNB reward mechanism in the market.

UltimateBNB Explained

UltimateBNB is the step forward in yield-generating contracts on the Binance Smart Chain (BSC); you receive rewards distributed in BNB rather than token reflections and the contract employs a static reward system. This allows rewards to extend outside of simply holding our coin as would a reflection-based coin operate.

ULTBNB's Tokenomics:

- Token supply of 1,000,000 ULTBNB

- 60% Burned Supply (600,000 ULTBNB)

- 360,000 Tokens Reserved for Pancake Listing (36%)

- 22% Buy and 23% Sale Tax*:

  - 15% BNB is redistributed among holders
  - 5% is used to increase the liquidity pool.
  - 2% is allocated towards funding the marketing wallet.
  - *1% is added to the tax when making a sale (~23% Sale Tax)

Traditional Token Redistribution Explained:

Classic redistribution

The mechanism incentivizes investors by passively earning dividends by other investor transactions made throughout their time holding tokens. The redistribution is based on a percentage (in the contract), current held token balance and number of holders influencing both volume and market capitulation.

TL; DR: You receive more tokens passively by buying and holding your own.

BNB Redistribution

A transaction fee is applied to every unique buy/sell order where the sold or bought tokens are then swapped in real time for BNB and added to a POOL (similar to how liquidity pools function). Holders can then go on a website built for claiming dividends and claim the net amount of BNB earned during a period of time since the last claim (daily / weekly / etc..). The BNB they collect is based on the percent of the supply they hold and the current pool's size.

You hold, then go on the website and request to claim your BNB rewards.

UltimateBNB's Redistribution Mechanism

Claiming manually is impractical for a few reasons:

• You have to connect your wallet manually to a website, creating an unnecessary step in order to secure your dividends.

• The wasteage of time produced by the frequent need to return to the website to repeat the process whenever you wish to receive your rewards.

• Providing enough knowledge to cryptocurrency investors in relation to fees, market fluctuation and transaction procedures is difficult. Therefore it is more difficult for them to be accustomed to this information until they go through the full claiming experience. This makes smart investing strategies hard to coordinate.

Due to these reasons, we have decided to use our unique system that auto-claims and redistributes the amounts due to all our holders!

How this works is when buying and holding a percent of the supply, every 20 minutes a dividend tracker will automatically calculate and distribute dividends among holders with your respective amount directly deposited within your wallet holding ULTBNB. There are no actions required in order to have this work and there is no minimum amount required to hold in order to receive your rewards.

*The dividends are distributed as Binance Smart Chain (BEP-20) tokens. There are no rewards reflected back into ULTBNB, thus your ULTBNB amount held will be unaffected.

Deep Dive into Dividend Processing and Allocation

• The contract keeps an index into an array for processing.

• The contract keeps track of all token holders within an array.

• The token is based on a Dividend-Paying Token Standard, where all the BNB the contract gains will be divided equally to the token holders relative to their amount held.

• Every token transaction processes a certain number of users, depending on the transaction size (bigger token transfers can process more, since the gas will still be proportionally less than the value of the tokens)*

• When a user is processed, the contract checks how many withdrawable dividends they have, and if it is above the minimum threshold for auto-claims, will either automatically claim those dividends for BNB, or automatically buy-back tokens for them.

*This refers to the purchasing and selling of tokens by holders, where smaller transactions will be batched together over time to allow for reduced accumulated gas fees in order to allow larger net dividend distribution.

The system is fully automated and doesn't add minimal gas fees proportional to value transferred. The number of holders processed through each transaction is dynamic and based on transaction size. Holders will receive dividends from the queue based on their position in the array. This allows for fairness among all holders.

Additional Information

• Token Information (provisional)

• Network: Binance Smart Chain (BEP-20)

• Ticker: ULTBNB

• Contract address: 0xc4b7a73e5b1a3ab0fcb72872e04157af9c581faf

• Decimals: 18

FAIR LAUNCH

• TOTAL SUPPLY : 1,000,000

• BURNT SUPPLY : 600,000 (60%)

• TOKENS FOR PANCAKE LISTING : 360,000 (36%)

• Fair Launch Date: August 11th 2021

• Liquidity Lock: 100% – Unlock Date : 52 Months Minimum

Security of UltimateBNB

<u>Locked Liquidity</u>

Initial liquidity will be locked for a minimum of 51 months to provide holders with peace of mind that the token can always be exchanged.
Link to LP Lock: https://deeplock.io/lock/0x560139736872Dd18B7936e45ff72DE440138A1F9

Contract Audit Prior after launch

The token contract is verified and available for viewing on BSCscan.

Other features :

Anti-Dump Logic

Price protection features such as max tx on sales are included. Any transaction selling more than 2500 tokens will be automatically rejected. This prevents massive one time sales that drastically impact the token price.

The "Max Buy per Transaction" allows for more rewards to holders whenever a large investor buys into the token.
